DATE OF RESULT: 3/3/25

IDEXX Services: Brucella canis Antibody by IFA (Non-export)

Serology

3/1/25 (Order Received) **3/3/25 5:22 PM** (Last Updated)

TEST

Brucella canis Antibody by IFA RESULT

Negative

9/5/24

Negative

Titers begin at 1:50, with positives titered to 1:200. Low titers (at 1:50) may indicate early infection, antibody response blunted by the use of antibiotics, or a false-positive due to cross-reacting antigens. Recommend either retesting in 30 days or confirmatory testing using AGID methodology.

Positives at 1:100 are suggestive of brucellosis. Highly recommend confirmatory testing using AGID methodology.

Positives at 1:200- Highly recommend confirmatory testing using AGID methodology and consultation with a clinical pathologist.

This test is not suitable for export. If testing is required for export, please select test codes marked "export".
